Carbon Overcoat

tough layer with lubricant
to reduce wear

Magnetic Layer

Chromium

Aluminium

low density, rigid,
& low cost

Cobalt with platinum & nickel

Sputtered onto chromium, which provides
grained surface that is replicated in magnetic
layer, which helps reduce signal noise

Platter

The diagram illustrates the layered structure of a hard disk platter. It consists of four overlapping circular layers, each with a central hole. From left to right, the layers are: a brownish-yellow Carbon Overcoat, a teal Magnetic Layer, a purple Chromium layer, and a light blue Aluminium layer. The layers are shown in a perspective view, overlapping each other. A red arrow points from the text 'Cobalt with platinum & nickel' to the Magnetic Layer.
